(b)(6)

Dear UST Owner/Operator:

You were recently mailed a certified letter dated March 13, 1995 which informed you that you had lost your opportunity to participate in the Tennessee Underground Storage Tank Fund due to failure to pay petroleum underground storage tank fees. As such, you are no longer eligible to receive any financial aid from the Fund for any leaks which have occurred since your Fund eligibility was terminated. All costs for cleanup of leaked petroleum contamination at the above location are your responsibility and further, should you be sued by a neighbor for property damage or personal injury from petroleum releases that is also now your full responsibility.

If you wish to restore eligibility to the State Fund for the location on the label above, you must take each of the following steps:

1. Properly register all petroleum underground storage tanks,
2. Pay all outstanding tank fees and late penalties, and
3. Conduct a site check in accordance with the procedures outlined in the enclosed Technical Guidance Document - 013 and submit the report to the appropriate field office for review.

Once these steps have been completed, establishment or restoration of fund eligibility will be considered. Fund eligibility establishment or restoration must not be assumed until confirmation from the Fund Management Section is received.

If you have any questions concerning this correspondence, call (615) 532-0945.

Sincerely,

Lamar Bradley

Mr. Robert Strong
State of Tennessee
Underground Storage Division
362 Carriage House Drive
Jackson, TN 38305

Dear Mr. Strong:

This letter will respond to your inquiry about underground storage tanks at our facility at One Delfield Drive, Covington, Tennessee.

There are currently no underground storage tanks of any nature in use at our Covington facility. To the best of our knowledge, the only historical existence of tank type storage was in the form of indoor floor sumps used by Litton Industries, the former owners of this plant. The sumps were cleaned, filled, and covered in February 1985 (detail enclosed).

If you have any further questions, please contact Mr. K. (Buddy) Warren, Maintenance Supervisor, at our Covington facility, 901/476-1225.

Very truly yours,

Charles R. McCollom
Vice President, Manufacturing

<u>Project</u>	I.I.P.I. (New Britain Tool) Process Waste Cleanup Covington, TN	<u>Date</u>	February 8, 1985
		<u>P.O. Number</u>	Z-2444-T
<u>Trip Dates</u>	February 6-7, 1985	<u>Project Authorization</u>	\$ 30,000.00
<u>By</u>	Keith A. Knapp Supervisor, Project Management	<u>Project Commitments</u>	\$ 25,660.00
		<u>Planned Completion</u>	February, 1985

Purpose

To verify the scope and expedite the completion of on-site cleanup activities.

Persons Contacted

Gordon Tengen	Director of Manufacturing	Delfield Corporation
Buddy Warren	Building Maintenance	Delfield Corporation
Larry Trapp	Supervisor, Field Operations	Chemical Waste Management, Inc.

Contract Documents

The Waste Transportation and Disposal Agreement for this project was signed by Litton on January 30 and by Chemical Waste Management on January 31, 1985. This contract covers the on-site cleanup operations, the loading and transportation of the waste materials to an approved facility as well as the treatment, storage and/or disposal of the waste materials in accordance with current EPA and state regulations.

Cleanup Operations

At the time of the writer's site visit, cleanup activities were progressing well by Chemical Waste Management. The liquids contained in the two floor sumps had been pumped into a tanker truck and transported to the waste storage and disposal facility in Emelle, AL. Roughly half of the concrete floor trenches had been cleaned of debris and existing PVC and metal piping. Debris and sludge from the bottom and sides of the trenches was being shoveled into EPA-approved 55 gallon steel drums; piping was piled onto polyethylene sheets and bundled for transportation to Emelle. Due to the deteriorated condition of many of the steel trench covers, Chemical Waste was instructed to also remove these from the site.

Following the cleanup of the floor trenches, overhead PVC ductwork was to be taken down, disassembled or sawed into smaller pieces and transported to Emelle.

The final cleanup operation on the site will be steamcleaning of the two floor sumps and the approximately 800 lineal feet of concrete floor trenches. Water used in this washing operation will be pumped into another tanker truck for disposal at Emelle.

Schedule

Mr. Trapp of Chemical Waste had hoped to complete these on-site cleanup activities by

APPENDIX I to §280.3

Notification for Underground Storage Tanks

FORM APPROVED
CONSISTENT WITH
APPROVAL DATES 10-1-85

STATE USE ONLY
I.D. Number **8-840025**
Date Received

GENERAL INFORMATION

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification program is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be based on reasonably available records, or, in the absence of such records, your knowledge, belief, or recollection.

Who Must Notify? Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means (a) in the case of an underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank used for the storage, use, or dispensing of regulated substances, and

(b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

What Tanks Are Included? Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

What Tanks Are Excluded? Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;
2. tanks used for storing heating oil for consumptive use on the premises where stored;
3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;

5. surface impoundments, pits, ponds, or lagoons;

6. storm water or waste water collection systems;

7. flow-through process tanks;

8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;

9. storage tanks situated in an underground area (such as a basement, cellar, mine, or tunnel) if the storage tank is situated upon or above the surface of the floor.

What Substances Are Covered? The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

Where To Notify? Completed notification forms should be sent to the address given at the top of this page.

When To Notify? 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

Penalties: Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

INSTRUCTIONS

Please type or print in ink all items except "signature" in Section V. This form must be completed for each location containing underground storage tanks. If more than 5 tanks are owned at this location, photocopy the reverse side, and staple continuation sheets to this form.

Indicate number of continuation sheets attached

Dear UST Facility Owner:

We have received your EPA Notification of Underground Storage Tank form(s), required by Section 9002 of the Resource Conservation and Recovery Act of 1976 (RCRA). You have been assigned the following Identification Number, which must be included on all future correspondence regarding these tanks.

Identification Number: 8-840025

Enclosed is a computer-generated copy of the data from your form. Please review it for completeness and accuracy, and notify us as soon as possible of any discrepancies you find. Please remember to include your Identification Number on any correspondence with us.

Thank you for your cooperation.

Yours truly,

Chuck Head, Environmental Manager
